

Installing Java Guide (JDK 11)

Windows

- Uninstall any existing versions of Java (if any) on your PC
- Download and install: https://cdn.azul.com/zulu/bin/zulu11.60.19-ca-fx-jdk11.0.17-win_x64.msi
- Restart your PC
- See HW0 for steps to check if it's correctly installed
- Consult with TAs if steps didn't work

Mac

- Download and install:
 - For Intel-based Macs (NOT M1 / M2):
https://cdn.azul.com/zulu/bin/zulu11.60.19-ca-fx-jdk11.0.17-macosx_x64.dmg
 - For Apple Silicon Macs (M1 and M2):
https://cdn.azul.com/zulu/bin/zulu11.60.19-ca-fx-jdk11.0.17-macosx_aarch64.dmg
- Restart your Mac
- See HW0 for steps to check if it's correctly installed
- If steps didn't work (usually shows some Java but not the expected one), follow these steps: <https://medium.com/@devkosal/switching-java-jdk-versions-on-macos-80bc868e686a>
 - Include step 5, but instead of adding it to just `~/.bash_profile` add it to the file (create the file if it doesn't exist) `~/.zshenv` too
 - Restart and see HW0 to see if it's correctly installed
- Consult with TAs if steps didn't work

Other

- See <https://www.azul.com/downloads/?version=java-11-lts&package=jdk-fx> for an appropriate version. Do not change the filters for "Java Version" and "Java Package" (should be autocompleted from link)
- See HW0 for steps to check if it's correctly installed
- Consult with TAs if steps didn't work
